REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The claimed invention is directed toward an integrated power system constructed on a single chip, the integrated power system comprising a fuel cell, a power converter, a fuel cell controller, means for detecting power and providing a feedback signal, and a means for connecting the signal to the fuel cell controller.

Marsh (6,312,846) discloses that a number of fuel cells can be electrically interconnected and coupled to gas sources on a portion of the same wafer to form a "power chip". Traditional electrical circuitry can be integrated on the wafer along with the chips to provide process monitoring and control functions for the individual cells. Wafers containing multiple chips (power discs) or multiple cells can then be vertically stacked upon one another. Marsh is concerned with building his structure on a wafer containing many chips. March further discloses schematic block diagram showing some of the possible circuits that may be integrated along with a microcontroller onto the semiconductor wafer 10 to monitor and control multiple cells performance. These functional parts are integrated but on separate chips with interconnections necessary between the chips. March neither teaches nor suggests placing this assembly on the same chips.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
